

SLIM-LINE

At *SLIM-LINE* when you have produced the finest filtration systems for as long as we have, an improvement is something you better get right!

Introducing our new filter plate with integrated center spacer hub. This plate is made from molded stress-free glass filled polypropylene for additional strength, durability and heat resistance.

We have added center reinforcing ribs to enhance the strength and sealing surface area between plates. This new innovative design features our exclusive molded outer stabilizers maintaining a secure paper media placement from beginning to end.

Unlike other manufacturers we do not simply rely on paper media alone as a base for pre-coat. Our filter plate has several layers to insure a positive retention of all particulate. First, we assemble a polypropylene coarse support membrane followed by our fine mesh filter screen for added media retention. Finally, paper or reusable cloth can be applied for easy cleaning.

This new design takes filtration to a higher level of flow and pressure meaning longer cycle times and yes, more overall filter area. This plate, while stronger and more durable, is thinner, instead of just 16 plates you can now install 21 in our new SLX 36 X 30 or upgrade your present system and increase your filter area as much as 30%.

For more than 50 years we have continuously challenged ourselves to improve our product and the results are obvious in our all new redesigned SLX models and advanced plate design.

The *SLIM-LINE ADVANTAGE* is more than just words it is a commitment to unsurpassed excellence.
